SYED SAMI ULLAH

Full Stack AI Engineer | AI Product Development | Generative AI & Agentic Systems
Lahore, Pakistan | +92 313 4304258 | syedsamiullah596@gmail.com | GitHub | LinkedIn | Portfolio

ABOUT ME

Full Stack AI Engineer specializing in building production-ready AI agents, RAG systems, and multi-agent workflows using LangChain, LangGraph, and LlamaIndex.
Experienced in developing end-to-end AI solutions with React/Next.js frontends and FastAPI/Node.js backends for real-world applications. Focused on creating reliable AI systems with automation, human-in-the-loop workflows, enterprise guardrails, monitoring, and error handling. Passionate about shipping scalable, production-grade AI products that solve complex business problems, Daily user of modern AI engineering tools such as Claude Code, Cursor, GitHub Copilot, and Codex to accelerate development and deliver reliable AI solutions.

CORE SKILLS

Frontend: React, Next.js, TypeScript, HTML/CSS, Tailwind CSS, responsive design
Backend: Python (FastAPI, Django), Node.js, Express, REST APIs, authentication
Databases: PostgreSQL, MongoDB, MySQL, vector databases for embeddings
AI & ML: LLM integration, RAG pipelines, fine-tuning, PyTorch, HuggingFace
Frameworks: LangChain, LangGraph, LlamaIndex, n8n for workflow automation
DevOps: Docker, AWS, Vercel deployment, GitHub, CI/CD pipelines
Tools: Claude Code, GitHub Copilot, LLM debugging and optimization, n8n, Crew Ai, Codex

PROFESSIONAL EXPERIENCE

Full Stack AI Engineer at Gulf Desk Services *— Present · UAE Clients*

Building AI-native ERP and CRM platforms with agentic workflows, RAG, and human-in-the-loop controls for UAE-based enterprise clients:

- Working exclusively with UAE-based clients, translating their enterprise operations into AI-powered ERP and CRM solutions and managing delivery end to end
- Architecting and developing full-stack ERP and CRM systems (Next.js, FastAPI, PostgreSQL) covering sales pipeline, inventory, procurement, finance, and HR modules with role-based access control and multi-tenant architecture
- Designing agentic AI workflows using LangGraph and LangChain with tool calling, function calling, and structured outputs to automate lead qualification, quotation generation, purchase orders, and invoice processing
- Implementing human-in-the-loop (HITL) approval checkpoints with LangGraph interrupts, so high-impact agent actions (financial entries, customer communications, record updates) require human review before execution
- Building production RAG pipelines with embeddings, vector databases (pgvector/Qdrant), hybrid search, and reranking, enabling natural-language querying over ERP records, contracts, SOPs, and customer history
- Establishing LLM evaluation frameworks using RAGAS, DeepEval, and LangSmith to measure retrieval precision, faithfulness, answer relevance, and agent task success, with regression evals in CI/CD before every release
- Implementing AI guardrails including input/output validation, PII redaction, prompt injection defense, and constrained action spaces to ensure safe, compliant agent behavior
- Integrating LLMs (OpenAI GPT, Anthropic Claude) into CRM features including AI lead scoring, conversation summarization, sentiment analysis, and next-best-action recommendations for sales teams
- Developing Model Context Protocol (MCP) servers and REST APIs to expose ERP/CRM data and actions securely to AI agents
- Setting up LLM observability and monitoring with LangSmith tracing, token cost tracking, latency dashboards, and audit logs for every agent decision
- Deploying containerized services with Docker and CI/CD pipelines on AWS/Azure, with async task processing via Redis and Celery for scalable agent execution

Agentic AI Engineer at Rank Arrow *— Jan 2026 – Aug 2026*

Architecting and deploying intelligent agentic systems with enterprise-grade guardrails for reliable automation at scale:

- Designed and implemented multi-agent systems using LangChain and LangGraph with built-in safety guardrails, reducing manual intervention by 70% while maintaining 99.2% accuracy
- Developed sophisticated AI agents for e-commerce automation, finance process optimization, and supply chain management with constrained action spaces and validation layers
- Built intelligent agentic systems with error handling, fallback mechanisms, and audit trails for compliance and monitoring across critical business processes
- Implemented enterprise CRM automation integrating AI-driven insights with human approval workflows, improving response time by 3.5x
- Created RAG pipelines with LlamaIndex for context-aware agent decision-making, reducing hallucination-related errors by 85%
- Orchestrated n8n automation workflows connecting legacy systems with AI services, accelerating end-to-end process execution by 60%
- Set up LangSmith monitoring infrastructure for production agentic systems with real-time performance tracking and anomaly detection
- Automated recurring manual processes including order processing, invoice reconciliation, and customer data management, saving 25+ hours weekly across teams.

Full Stack AI Engineer at Accelerate AI *— 2024 - 2026*

- Built production RAG systems with LangChain and vector databases, significantly reducing hallucination and improving accuracy for domain-specific queries
- Developed high-performance APIs using FastAPI and Node.js handling concurrent requests with minimal latency improvements
- Created full-stack applications with Next.js frontend and Python backend integrating LLM inference
- Implemented multi-agent workflows using LangGraph reducing manual work and improving efficiency
- Fine-tuned language models using PEFT on specialized datasets, optimizing both performance and computational costs
- Built and deployed n8n automation workflows replacing manual processes across support and sales operations
- Set up LLM monitoring and observability for production systems using debugging tools

Freelance Full Stack Developer at Fiverr & Upwork *— 2023 - 2024*

- Delivered multiple GenAI solutions for international clients with strong feedback and repeat business
- Created automated content research and e-commerce AI integrations saving clients significant time
- Built multi-source research agents and web automation workflows using modern frameworks
- Designed lead generation and CRM automation systems improving client conversion rates

PROJECTS

Multi-Agent AI Operating System for E-Commerce

- Architected a production-grade, self-hosted multi-agent AI operating system automating end-to-end e-commerce operations across **product management, pricing, sales, marketing, finance, dispatch, customer support**.
- Designed hierarchical LangGraph orchestration with a CEO supervisor coordinating 8+ specialized departmental agents and human-in-the-loop approval workflows.
- Built a custom PostgreSQL observability platform capturing LLM telemetry (tokens, latency, cost) with real-time monitoring, audit trails, and anomaly detection.
- Implemented a 4-tier AI governance model (**Autonomous → Notify → Approval Required → Human Decision**) ensuring AI executes while humans govern, maintaining explainability and audit trails for every decision.
- Engineered a production RAG system using pgvector for low-latency retrieval over 100K+ embeddings and context-aware responses.
- Integrated WhatsApp Cloud API, WooCommerce, Meta Marketing API, and courier services using secure, stateful webhooks with HMAC validation.
- Added production safeguards including recursion limits, cost monitoring, graceful failure handling, and multimodal OCR-powered market intelligence.
- Achieved <3s end-to-end response latency for WhatsApp customer interactions with a fully self-hosted PostgreSQL, Redis, and Docker-based infrastructure.

  Tech Stack: Python (FastAPI, LangGraph, Celery), PostgreSQL (pgvector), Redis, Next.js, Docker.

Ghost AI Meeting Assistant

- Built an AI overlay application that works invisibly during video calls, providing real-time contextual guidance
- Integrated speech recognition to transcribe meetings and OCR for screen content analysis
- Implemented persistent memory system that recalls previous meeting context for coherent multi-turn conversations
- Achieved high accuracy across multiple languages using modern AI models

YouTube Research and Automation Agent - Click here To Test

- Created autonomous workflow using AI for channel trend analysis, competitor research, and topic discovery
- Automated what typically takes hours into a single workflow execution saving significant research time
- Built RESTful API wrapper for easy integration into content team workflow.

Medical AI Chatbot with RAG

- Created a retrieval-augmented generation system trained on medical documents for accurate, cited answers
- Built React frontend with FastAPI backend handling multiple concurrent users with fast response times
- Implemented vector database integration for intelligent document retrieval and hybrid search
- Significantly reduced hallucinations through structured citation and confidence-based filtering

E-Commerce Size and Fit Solution – Click Here To Test

- Developed AI-powered recommendation engine matching customer biometrics to brand-specific sizing charts
- Built multimodal system combining computer vision and LLM logic for personalized recommendations
- Integrated virtual try-on APIs and size prediction improving accuracy for customers

AI Lead Generation & Outreach Automation

- Orchestrated end-to-end workflow in n8n integrating lead sources, AI email generation, and CRM updates
- Automated lead scoring and hyper-personalized outreach reducing manual sales work
- Deployed on AWS with self-hosted infrastructure reducing monthly tool costs significantly

Multi-Channel AI Support Bot

- Built unified AI support system handling WhatsApp, Telegram, and email simultaneously
- Implemented conversation memory allowing coherent multi-turn discussions across all channels
- Orchestrated with n8n managing message routing and maintaining per-user context across platforms

EDUCATION

Bachelor of Science in Artificial Intelligence — Superior University, Pakistan

AI Engineer Associate Certification — DataCamp
